

Kavyanjali Karan

Business Intelligence – Data & Metrics Analytics

Bhubaneswar, Odisha, India (Open to Relocate)

karankavyanjali77@gmail.com | [linkedin.com/in/kavyanjali-karan](https://www.linkedin.com/in/kavyanjali-karan) | github.com/kavyanjali-karan

Professional Summary

Computer Science undergraduate with hands-on experience designing success metrics frameworks and performance tracking systems that convert large, disparate operational data sets into decision-ready reporting and executive data narratives. Experienced in statistical problem-solving using SQL and Python, root cause analysis (RCA) on metric fluctuations, experiment design, KPI governance, dimensional data modeling, and Power BI/Tableau visualization. Skilled at bridging granular data work with high-visibility, non-technical stakeholder communication to drive measurable business impact.

Technical Skills

Statistical Analysis and Experimentation: Statistical Problem-Solving, Root Cause Analysis (RCA), Data Mining, Experiment Design, Metrics Framework Design, Process Optimization

Data Engineering: SQL (window functions, CTEs, multi-table joins), Python (Pandas, NumPy), ETL, Data Validation, Data Quality, Large and Disparate Data Set Integration

Cloud Analytics: Amazon S3, AWS Glue, AWS Athena, Amazon QuickSight, Amazon Redshift

Data Modeling: Dimensional Modeling, Star Schema, Data Warehousing

BI and Reporting: Power BI, Tableau, DAX, Power Query, KPI Governance, Semantic Layer, Executive Reporting

Tools: PostgreSQL, MySQL, Git, GitHub, GitHub Actions, Docker, Makefile, Excel

Projects

AWS Athena QuickSight Sales Analytics

[GitHub](#)

- Identified a measurement gap in sales performance tracking caused by the absence of a scalable analytics architecture, and engineered a serverless AWS workflow (S3, Glue, Athena, QuickSight) as the operational benchmark solution.
- Applied statistical problem-solving in SQL to build reporting views and curated analytical data sets across large operational data volumes.
- Delivered an end-to-end BI reporting system spanning cloud-native data storage, cataloging, querying, and visualization for stakeholder consumption.

Executive KPI Governance Platform

[GitHub](#)

- Designed and matured a top-line success metrics and KPI governance framework using dimensional modeling and Power BI/Tableau semantic models to standardize definitions across executive, operational, and management reporting.
- Built SQL transformation pipelines that synthesized large, disparate operational data sets into curated analytical data, enabling consistent executive-level data narratives.
- Implemented repository automation, validation checks, and reproducible workflows (GitHub Actions, Docker, Makefile) to support process optimization and reliable BI delivery.

Customer Retention Intelligence Platform

[GitHub](#)

- Synthesized customer, revenue, product, and regional data from disparate sources into a centralized analytical model to support statistical segmentation and retention analysis.
- Conducted quantitative investigation into retention and revenue metric drivers, disentangling confounding variables to isolate true performance drivers.
- Applied ETL validation and data quality checks throughout the pipeline to ensure reliable, repeatable, and governed reporting outputs.

Marketplace Growth Performance Review

[GitHub](#)

- Unified customer, seller, product, and order data into governed analytical models, translating large data work streams into Power BI and Tableau dashboards for marketplace performance tracking.
- Partnered across data preparation, business logic, and reporting layers to build scalable, maintainable BI architecture supporting cross-functional stakeholder decisions.
- Delivered consistent analysis of sales performance, seller activity, product trends, and regional metrics to drive measurable business impact.

Growth Funnel Performance Review

[GitHub](#)

- Designed an experiment-ready growth analytics framework measuring acquisition, activation, engagement, conversion, and retention through standardized funnel metrics.
- Performed root cause analysis on funnel drop-offs and anomalous conversion shifts, translating customer journey data into Power BI dashboards and actionable, decision-ready recommendations.
- Documented KPI definitions, reporting assumptions, and analytical logic to support reliable interpretation, reuse, and cross-functional communication of funnel performance metrics.

Achievements

- Selected Participant, McKinsey Forward Program (2026)
- National Round 2 Qualifier, L&T Techgium 2025
- Participant, Guidewire DEVTrails University Hackathon (2026)

Certifications

- Fundamentals of Analytics on AWS – Part 1, AWS Training and Certification – Jun 2026
- Data Analytics Job Simulation, Deloitte (Forage) – Oct 2025
- GenAI Powered Data Analytics Job Simulation, Tata (Forage) – Feb 2026
- Solutions Architecture Job Simulation, AWS (Forage) – Feb 2026
- McKinsey Forward Program – Credly Verified [Badge](#)

Education

B.Tech. Computer Science and Engineering

Expected Graduation: 2027

ITER, Siksha O Anusandhan University, Bhubaneswar

Relevant Coursework: Database Management Systems (DBMS), Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Probability and Statistics, Python Programming
